

DUALDRIVE

JCB
DESIGNWORKS

LESS TURNING MORE EARNING

JCB has once again set the standard for backhoe loaders, this time by thinking backwards! DUALDRIVE solves what many operators consider to be a pain in the back! No longer does the operator need to turn the seat to reposition the machine when undertaking backhoe applications. Thanks to an additional drive system, located at the rear of the machine, the operator now has complete control whilst facing the rear. This means the tiresome seat rotations are virtually eliminated, saving effort, time and cost.
